

Amendments to the Claims

The listing of claims will replace the previous version, and the listing of claims:

Listing of Claims

1. (Currently amended) A multicolor glass vessel, comprising a base vessel, a multilayer film composed of two vapor deposition layers whose refractive indices differ from each other by 0.1 or more, and a hardened coating film interposed between the base vessel and the multilayer film,

wherein the two vapor deposition layers comprises a first layer and a second layer which covers the first layer, the first and second layers being sequentially provided on at least one of an external surface and an internal surface of the base vessel,

wherein the first layer has a refractive index lower than a refractive index of the second layer, and contains at least one layer selected from the group consisting of a silica layer, a chromium layer, a zirconium layer, and an aluminum layer,

wherein the second layer contains a titanium layer,

wherein the hardened coating film comprises at least one material selected from the group consisting of polysiloxane-based resin, melamine resin, phenol resin, urea resin, guanamine resin, and derivatives thereof, and

wherein the hardened coating film has a thicknesses in a range of about 1 to 100 μm , and a hardness more than 3H in pencil hardness.

2. (Currently amended) The multicolor glass vessel as described in claim 1, wherein the two vapor deposition layers are comprise a silica layers layer and a titanium layers layer, and are arranged alternately more than two layers, respectively.

3. (Currently amended) The multicolor glass vessel as described in claim 1, wherein the multiple vapor deposition layers have respective thicknesses in a range of 50 to 3,000 ~~μm~~ nm.

4-10. (Canceled)

11. (New) The multicolor glass vessel as described in claim 1, wherein the hardened layer has the hardness between 3H and 5H in pencil hardness in accordance with JIS K5600.

12. (New) The multicolor glass vessel as described in claim 11, wherein the multilayer film comprises a plurality of a set of the first and second layers, and, as a lower layer of said multilayer film, at least one layer having a thickness of 10-100 nm and selected from the group consisting of a silica layer, a chromium layer, a zirconium layer and an aluminum layer,

13. (New) The multicolor glass vessel as described in claim 1, wherein the base vessel comprises a hyaline glass, colored transparent glass or colored semitransparent glass.
